

## How To Order

### .01 Choose Your Size

We offer a wide variety of sizes to fit every project. The larger the diameter, the more daylight can be captured to light the area below. Below are the various sizes we offer.

#### Common Residential Sizes

Most common sizes for residential applications are the 10" and 13" diameter solar tunnels.

#### Common Commercial Sizes

Most common sizes for Commercial applications are the 21" and 32" diameter Solar Tunnels. 21" for residential as well.

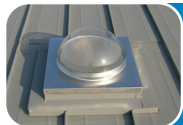

### .02 Choose Your Flashing

We carry both pitched roof and flat curb flashings. Based on your roof type, this choice is straight forward. Be sure to choose the right flashing based on your roof.

#### Pitched Roof Flashing

Designed for quick installation on pitched roofs.

#### Flat Roof Curb Flashing

Designed for installation on flat roofs with curbs.

### .03 Calculate Tube Length

Each kit comes with 4' (nominal) of rigid light tunnels. This is composed of 1pc. 24" Straight Tunnel and 2pc. 45° Elbows. When calculating overall light tunnel length required, be sure to compensate for the curb height and the approx. 4" overlap of each light tunnel section. Additional pieces can be purchased if required.

## In The Know

### ✓ Solar Tunnels Explained

A Solar Tunnel is a natural daylighting tubular system that allows any dark room to be transformed into a bright, vivid area. The sunlight is captured by the dome assembly on the roof, and then travels through a reflective tube. The reflected light is carried through the tube and provides daylight to the area below.

### ✓ Benefits

The most noticeable benefit of a Solar Tunnel is the natural daylighting that is carried into the building to brighten up darkly lit rooms without any additional energy consumption. The addition of natural daylighting will help improve your mood and concentration. There are no structural changes needed to your home for installation.

NO STRUCTURAL CHANGES REQUIRED FOR INSTALL

### ✓ Our Difference

Our Solar Tunnels are built to the highest quality possible with durability and longevity at the forefront of their design. As each component of our system is manufactured, they are carefully inspected for complete quality assurance. Hurricane tested and NFRC approved, our Solar Tunnels are amongst the most elite product available.

Sheds

DID YOU KNOW: THERE ARE 4 DIFFERENT SIZED SOLAR TUNNELS TO CHOOSE FROM. EACH PERFECT FOR SPECIFIC APPLICATIONS.

## Product Details

### Prime-Silver® Light Tubes

All of our light tubes utilize Prime-Silver® Performance technology to delivery 98% total light reflectivity. Compared to traditional polymer-laminated light tubes, the Prime-Silver® is the highest performing reflectivity coating available. In addition, each tube is a rigid construction and have been clear anodized to protect against corrosion.

### Heavy Gauge Flashing & Tubes

Heavy grade construction of our Solar Tunnels results in increased durability. The flashing is a unique, one piece seamless construction made with heavy gauge aluminum. And our tubes are only offered in rigid style to highlight our commitment to durability and effectiveness. This offers maximum leak protection and daylight output.

### Easy Installation

Solar Tunnels are one of the easiest and quickest ways of getting natural light to dark rooms. Installation is quick and easy with no structural changes needed to the roof line.

- 1 High Impact Dome Assembly
- 2 Prismatic Scatter Disc
- 3 Seamless Heavy Gauge Aluminum Flashing
- 4 Prime-Silver® Anodized Aluminum Light Tube
- 5 Trim Ring
- 6 Prismatic Light Diffuser
- 7 Decorative Interior Ring

## Commercial Solar Tunnels

Our commercial solar tunnels are crafted for maximum lumens and application flexibility. Perfect for any office, warehouse, or open space, the possibility of offsetting today's high-cost electricity bills are now more attainable than ever.

## BIGGER JUST GOT BETTER

At 32" in diameter, we provide the largest diameter tubular skylight in the industry. This unit can provide up to a 21,000 lumen output and a coverage of up to 1,000sqft. The sole purpose of this Solar Tunnel is to maximize any space with efficient, clean day light.
